Harm Reduction TA Center

## CRACK, ROCK COCAINE

Brass screens are best. As for them at your SSP.

- If you are using a scrubber for a screen, copper (Chore Boy) is better than steel wool, which can break apart and burn your mouth and throat when it gets hot.
- Pre-burn your scrubber to release toxic fumes.
- If sharing a pipe, use your own rubber mouthpiece (sparkplug cover or rubber bands).

# GLASS BUBBLE PIPE

## METH, FENTANYL

- Inhale slow and exhale fast. Holding in your hit won't get you higher but it will damage your lungs.
- Heat the pipe from underneath and keep the flame moving around the bowl so you melt the drugs instead of burning them. This helps prevent the pipe from cracking and wastes less drugs.
